## Japan

Japanese consumers are buying more ready-to-eat and convenience foods. Imports of prepared poultry products have nearly tripled since 1996. The trend is toward processed poultry products which are prepared overseas for export to Japan, primarily through direct foreign investments and joint ventures in countries like China and Thailand, where Japanese companies can take advantage of abundant supplies of cheap labor.

### Japanese Imports of Prepared Poultry Products (MT)

	Thailand	China	U.S.	Others	Total
1996	30,168	24,568	10,398	3,100	68,234

In 2002 the demand for fresh table eggs is projected down slightly from 2001. Japan's weak economy and an unusually warm winter will constrain household consumption. Egg production in 2002 is forecast slightly below last year's level due to low market prices for eggs. Imports of frozen liquid albumen are expected to fall in 2002 due to availability of low priced domestic product. Imports of powdered albumen will also slow in 2002 due to relatively stagnant demand for ham and sausage products (powdered albumen is used as a binding agent in the preparation of ham and sausage products.) Brazil is the largest supplier of albumen to Japan.

The U.S. supplies about 90 percent of Japan's frozen liquid yolk imports, which are about 12,000 mt per year. The decline in U.S. imports due to recent bans could allow Brazil and Canada to increase market share. The U.S. is also the dominant supplier of powdered whole eggs and powdered yolk. U.S. market share is expected to slip in 2002 due to the weak yen and increased competition from low-priced competitors like Canada, India and the EU.

## Japan Ban on U.S. Poultry and Egg Products

On March 22 FSIS announced that effective immediately and until further notice, all egg products are ineligible for export to Japan. A restriction for egg products produced in or transiting the States of Pennsylvania and Maine was already in effect prior to this latest restriction. Egg products from all remaining States are now ineligible.

All fresh/frozen poultry and poultry products (including cooked) are ineligible for export to Japan. Canned poultry remains eligible. Other shelf-stable products may be eligible on a case-by-case basis and exporters of these products are advised to seek confirmation of eligibility through their importer and the issuance of a valid import permit for the product. Military shipments are also included in this import restriction and are now ineligible, unless they fit one of the exceptions indicated.

Eligibility, Processing, Labeling, and Documentation sections remain unchanged for information only and does not imply that poultry is eligible until the restriction is eased or removed.

## World Broiler Trade

For 2002, total broiler exports are forecast at a record 6.3 million tons, up 5 percent from last year. The United States, Brazil, and Thailand, are forecast to increase exports supported by increased production, while the EU's exports are expected to decrease mainly due to high prices even with export subsidies.

### 2002 Broiler Forecast in Million Metric Tons

	U.S.	Brazil	China	EU	
Exports	2.9	1.4	.51	.68	
Percent Chg	+3	+13	+4	-3	
	Japan	Mexico	China	EU	Russia
Imports	.72	.24	.9	.38	1.35
Percent Chg	+1	+2	n/c	+9	+5

The Brazilians are focusing exports of both whole birds and parts. Brazil is expected to increase exports to the Middle East, Asia, Africa, and the EU. Due partly to a trade dispute with Japan over chemical residues in Chinese broiler products, China is focusing more on exports of heat-treated products to mitigate quarantine issues since these products face fewer sanitary restrictions. EU broiler exports are forecast to continue their downward trend in 2002, largely due to increased domestic consumption and decreased competitiveness in whole bird markets in the Middle East. EU imports are projected to grow under a lower tariff from Brazil, Thailand, and other Eastern European countries. Japan is expected to import more from Thailand as imports from China may be limited due to health concerns. The impact of the ban on Russia's broiler imports and consumption remains to be seen at the time of this analysis. The U.S. supplied more than 80 percent of Russian broiler imports in 2000.

**NATIONAL YOUNG TURKEY PARTS AND BULK MEAT, FROZEN (UNLESS SPECIFIED), CENTS PER LB., DELIVERED FIRST RECEIVERS, PART AND FULL TRUCKLOTS AS OF 22 MARCH 2002.**

Trading generally light and at steady to weak price levels. Demand very slow and selective. The market remains mixed due to a combination of factors from the recent ban of product to Russia and the upcoming Easter holiday. Supplies of export and domestic product more than adequate for trade needs, except hen parts mostly balanced.
